

TRANSTEX BELTING SALES & CUSTOMER SERVICE MAP

Our South Charlotte, NC manufacturing facility utilizes multiple manufacturing lines to produce a broad spectrum of PVC and Urethane belts that serve a wide range of markets – agricultural, food processing, airport baggage, package handling, recycling and wood products.

Our Extensive Product Range

Transtex proven brands of PVC, PVK and PHR provide dimensional stability, controlled elongation, and excellent fastener retention. Splicing and longitudinal seams are also available.

Industry Standard (IS) Roughtops first start with special fabrics designed for the small pulleys commonly found in lightweight applications. For this purpose, we have developed RFL treated fabrics that offer increased flexibility, good fastener retention and are rated at 50 to 75 lbs/inch per ply.

Our QB or “Silent Partner” belt is designed for quiet operation. Our unique needle felted carcass design is far superior in tracking and fastener retention.

PRL or plied PVC and Urethane belting utilizes a monofilament carcass resulting in a lightweight and low friction bottom effectively reducing your operating costs. PRL or plied PVC and Urethane belting also comes equipped with anti-static properties.

Ask us about Polarflex® belting, our latest innovation for abrasive applications where low temperatures are present.

Forbo Transtex Polyurethane belts are your best defense against harsh, abrasive materials that can destroy your conveyor belts. Whether conveyor recycled products, metal, wood, foundry products, food or chemicals, with Forbo Transtex Polyurethane belts you can really handle the rough stuff.

Finding the right belt to convey large, heavy boxes or other oversized packages can be a real challenge. Forbo Transtex has developed a belt that provides low co-efficient of friction with special covers for the smoothest conveying. GLIDETOP® is your answer where control is needed.

Forbo Movement Systems Transtex Belting products are tough, sturdy and long-lasting conveyor belts with superior carcass construction and carefully selected covers of PVC and Rubber providing exceptional wear.

Our vision is clear. We want to ensure our customer’s success by producing highly innovative products that deliver reliability, safety and value. We do this by identifying our customer’s needs, developing unique solutions in response to their needs, and by producing quality conveyor belting to meet the challenges of each operating environment. The result of a marriage of two pioneers in the belting industry, Forbo-Transtex’s product lines combine the best products, processes and technological expertise in the market today.
